

QUALITY AND ENVIRONMENTAL POLICY

Our business policy is proven through many years of successfully conducting business in selling and servicing of different kind of equipment, accessories, spare parts and measuring devices in the field of electricity, gas and water transmission and distribution.

Quality and environmental management policy is the basis of ELOB d.o.o. business management, which is focused on providing services and delivering products to the satisfaction of our customers and respecting their wishes and needs.

ELOB d.o.o. therefore chooses reliable suppliers who provide quality-material products and have the awareness of the environmental impact of their products, hence ensuring they are harmless to the environment, biodegradable and have longer product lifetime, resulting in less waste.

By applying an integrated quality and environmental management system, ELOB d.o.o. has established an organized structure of responsibilities, activities, resources and methods that ensures the ability to meet the requirements of partners regarding the quality of services; at the same time abiding by existing laws, international agreements and conventions and meeting the requirements of international standards ISO 9001:2015 and ISO 14001:2015 as well as all of our own specifications and work performance standards.
